📍 Islamabad, Pakistan

Professional Summary

Motivated Computer Science student with strong foundations in Artificial Intelligence, Deep Learning, Computer Vision, Machine Learning, Software Engineering, and Data Science. Experienced in developing intelligent systems using Python, PyTorch, OpenCV, YOLO, and OCR technologies. Passionate about assistive technologies, human-centered AI, multimodal systems, and computer vision research. Seeking opportunities to apply AI and deep learning expertise in real-world research and development environments.

Technical Skills

Artificial Intelligence: Deep Learning, Machine Learning, Computer Vision, Object Detection, OCR Systems, Multimodal AI, AI Model Training

Programming Languages: Python, C++, HTML, CSS

Frameworks & Libraries: PyTorch, TorchVision, Ultralytics YOLO, OpenCV, EasyOCR, NumPy, Pandas, Scikit-Learn, Flask, Ollama, TIMM, Supervision

Tools: GitHub, VS Code

Core Competencies: Data Analysis, Problem Solving, Model Evaluation, Research and Development

Projects

AI Lens for Visually Impaired Navigation *Python, PyTorch, YOLOv8, OpenCV, EasyOCR, Ollama*

- Designed and developed an AI-powered navigation system for visually impaired individuals.
- Implemented real-time object detection and tracking using YOLOv8.
- Integrated OCR and text-to-speech guidance for scene understanding.
- Developed weather classification and environmental awareness modules.
- Incorporated conversational AI capabilities using Ollama LLM.
- Received Winner Shield and Certificate of Excellence in IEEE Department Innovation Challenge 2026.

AI OCR Reader *Python, Deep Learning, OCR*

- Developed an OCR-based system capable of extracting and reading text from images.
- Implemented image preprocessing and text recognition pipelines.
- Applied deep learning techniques for accurate character recognition.

Football Analysis, Event Detection and Future Prediction System *Python, Pandas, Scikit-Learn*

- Built a football analytics platform for event detection and predictive analysis.
- Applied machine learning algorithms for performance prediction.
- Performed data analysis, model training and evaluation.

Research Experience

Bahria University Islamabad

2025 – Present

Researcher – Deep Learning & Computer Vision

- Conducting research in Artificial Intelligence, Computer Vision, and Deep Learning.
- Performed model training and evaluation.

- Developed object detection, OCR, depth estimation, and multimodal AI systems.
- Worked on assistive technologies aimed at improving accessibility for visually impaired individuals.
- Explored Human-Centered AI and intelligent multimodal systems for real-world applications.

Education

Bahria University Islamabad

2023 – Expected 2027

Bachelor of Science in Computer Science

CGPA: **3.44/4.00**

Achievements & Certifications

- Winner – IEEE Department Innovation Challenge 2026.
- Awarded Winner Shield and Certificate of Excellence for the project **AI Lens for Visually Impaired Navigation**.
- UI/UX Design Certification – Air University Incubation Center.

Activities & Interests

- Artificial Intelligence Research
- Deep Learning & Computer Vision
- Assistive Technologies
- Open Source Development
- Machine Learning Applications
